Welcome to our system!

Below is a guide to help you understand and effectively use the supported commands. Our system allows the creation of orders, which include products that are delivered on fixed days or orders in which the customer defines the days each time. There is also support for creating quantity agreements between the customer and the suppliers. At any stage of running the system, the user will be able to enter 'help' and he will be presented with a menu of options and instructions for using each of them. When finished, he can press 'exit' and exit the system.

Also, already in the initial phase there are three suppliers in the system.
